Software Engineer with 2+ years of experience building backend and enterprise applications using JavaScript, TypeScript, Python, SQL, Node.js, PostgreSQL, and AWS. Skilled in REST API development, database optimization, backend automation, CI/CD, application troubleshooting, and automated testing. Strong foundation in Agile methodologies, software development lifecycle, production support, and cross-functional collaboration.

EXPERIENCE

Software Developer Engineer, *MOGI I/O*

08/2022 – 07/2023 | New Delhi, India

- Built and deployed production applications using TypeScript, Node.js, PostgreSQL, and AWS.
- Improved API response time 25% by optimizing REST APIs, PostgreSQL queries, and Redis caching.
- Reduced UI defects 35% through modular components, testing, and structured code reviews.
- Reduced deployment time 30% by implementing CI/CD pipelines with Docker and GitHub Actions.
- Developed backend services and API integrations supporting application functionality and business workflows.
- Investigated application and API issues through debugging, testing, and collaboration with QA and engineering teams.
- Collaborated with product, design, data, and QA teams to translate requirements into technical solutions.

Software Developer Engineer, *DYNAPT*

07/2021 – 08/2022 | New Delhi, India

- Improved data retrieval time 40% by redesigning PostgreSQL schemas and optimizing SQL queries across relational data models.
- Developed backend services using Node.js, Python, PostgreSQL, REST APIs, and AWS.
- Built backend automation solutions using Node.js and Python to improve application workflows and reduce repetitive development tasks.
- Increased application reliability through Jest unit and integration testing, code reviews, and CI/CD workflows.
- Investigated production issues across application, database, and API layers to identify and resolve software defects.
- Collaborated with product managers, designers, and QA engineers in Agile sprints, tracking development tasks through Jira.

EDUCATION

Mobile Application Development and Strategy Program, *George Brown College*

01/2024 – 12/2025 | Toronto, Canada

Blockchain Development Program, *George Brown College*

09/2023 – 08/2024 | Toronto, Canada

Master of Computer Applications, *Jamia Hamdard University*

04/2017 – 03/2020 | New Delhi, India

SKILLS

Languages: JavaScript, TypeScript, Python, SQL

Backend: Node.js, Express, REST APIs, Microservices, API Integration

Databases: PostgreSQL, MongoDB, Redis, SQL Optimization

Cloud/DevOps: AWS, Docker, GitHub Actions, CI/CD

Testing: Unit/Integration Testing, API Validation, Debugging

Agile / Tools: Jira, Agile/Scrum, SDLC, Git, Code Reviews, Production Support, Incident Troubleshooting

PROJECTS

AI-Powered Career SaaS Platform | MERN Stack, TypeScript, Gemini API, Razorpay

- Built a full-stack career platform using MongoDB, Express.js, React.js, Node.js, and TypeScript, integrating multiple career-development workflows into a single application.
- Developed RESTful backend services for AI resume analysis, ATS scoring, job matching, resume generation, and personalized interview question generation using the Gemini API.
- Integrated Google OAuth authentication and Razorpay subscription payments through third-party API integrations.
- Built and deployed the full-stack application, gaining hands-on experience across application development, API integration, testing, and deployment.

FitFlex Fitness App | React Native, Firebase, Google Maps API, Figma

- Built a cloud-connected mobile application with authentication, persistent data storage, and third-party API integrations.
- Implemented Firebase Authentication and Firestore data persistence for application users and activity data.
- Integrated AI functionality and external APIs to provide personalized application features and user experiences.

Social Media App | MERN Stack, Jest

- Built backend services and REST APIs supporting authentication, user data, feeds, and real-time functionality.
- Optimized MongoDB indexes and queries to improve data retrieval performance for high-volume application operations.
- Implemented Jest unit testing and CI/CD workflows to improve application reliability and reduce production regressions.
- Investigated API and backend issues through debugging, testing, and structured development workflows.
